

Get more power for less money.

5 Reasons To Upgrade to the F370®

Faster Printing

Get your printed parts in hand faster. Compared to older legacy Stratasys printers the F370 is 80%-100% faster and up to 2-5x faster than competing printers.

Plug-and-Print Simplicity

Focus on print results rather than how to operate the printer. Easy material loading, an intuitive user interface and simple CAD-to-print software allow anyone to print with professional results.

Versatile Materials

Leverage the F370's diverse polymer selection for new applications. Eight materials span the capability range from flexible TPU to engineering-grade thermoplastics to carbon fiber-reinforced ABS.

Clean and Quiet

Put industrial-grade 3D printing where you need it. The F370 runs quiet, clean and safe, perfectly suited for an office, classroom, or shop floor.

99% Repeatability + Accuracy

While the legacy systems are also reliable and consistent, the next-generation of FDM/F123 series takes that bullet-proof reliability to the next level.

How resourceful are your current printers? For a limited time, trade in your legacy Stratasys printer and

Get up to 35% off*
the price of the highly sought-after F370 for a limited time only.

Upgrade to reliable, proficient 3D printing at a price and performance that is hard to beat!

Valid for bookings + shipments 01-Jan to 31-Mar 2024.
